

# Customer Transcript 04

A product designer describes the hidden cost of rebuilding context between every tool.

SESSION 04 / DISTRIBUTED MEDIA TEAM / PRODUCT DESIGNER

|                                                               |                                                                                                                                                                                                                                  |
|---------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>INTERVIEWER</b><br>What usually breaks your momentum?      | <b>PARTICIPANT</b><br><i>It is rarely the creative task. I stop because the file is in Drive, the feedback is in Slack, and the AI draft is in another tab. Before I continue, I have to rebuild the story of what happened.</i> |
| <b>INTERVIEWER</b><br>What does your team do next?            | <b>PARTICIPANT</b><br><i>Someone asks for the newest export. We send it again, then explain which comments still apply. The tools are powerful, but none of them share the same memory of the work.</i>                          |
| <b>INTERVIEWER</b><br>What would feel meaningfully different? | <b>PARTICIPANT</b><br><i>Open the project and keep moving. The team and the AI should already understand the files, decisions, and next step.</i>                                                                                |
