

Product Research Brief

Testing whether a shared working context can protect team momentum.

Research question

Why do capable teams lose momentum even when they already have cloud storage, collaboration tools, and powerful AI models?

What we are testing

- 01 People can find the latest evidence without asking a teammate.
- 02 Shared discussion stays connected to the files that informed it.
- 03 An Agent can act with the same working context as the team.
- 04 A repeatable workflow moves research forward without handoffs.

Success signal

A teammate can enter one Space, understand what changed, inspect the source material, and continue the work without requesting another upload or recap.
